

Performance analysis and results report

During the test execution, 31 test cases were run, of which 29 passed and 2 failed.

Regarding the two failed test cases, for illustrative purposes, one is related to a real bug found on the test page and the other was intentionally created by error in the automated test code for the purpose of reporting results.

Execution Summary

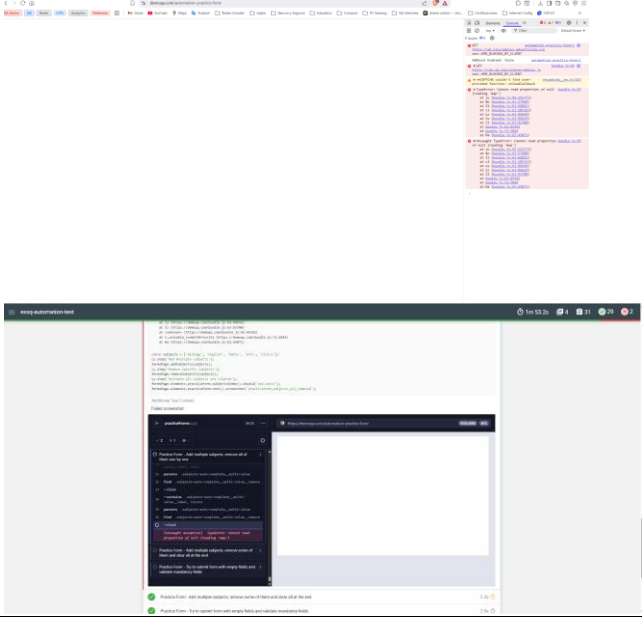

Metric	Value
Tests Executed	31
Tests Passed	29
Tests Failed	2
Tests Skipped	0
% Success	93.55

During the automated execution of the two failed tests, manual validation was performed, revealing the following:

1. The test, "Practice Form - Add multiple subjects, remove all of them one by one," detected a potential bug in our system. This has already been documented, created, and reported to the team.
2. The test, "Practice Form - Submit form filling only mandatory fields," requires an update from the automation team, as it is generating a false positive when validating the date in the form's date field.

Found Bugs

Bug 1:

Summary	After delete the only or last subject in the subject input the page crash and generate a blank page
Severity	Higher
Description	When the user enters multiple subjects and proceeds to delete them all, upon deleting the only subject remaining within the element, it triggers a runtime error on the page, displaying the following error in the browser console: <Uncaught TypeError: Cannot read properties of null (reading 'map')>. This blocks the client flow when filling out the form, preventing it from continuing correctly.
Environment	Chrome Browser, Staging Environment
Steps to reproduce	1. Navigate to https://demoqa.com/automation-practice-form 2. In the Subjects in put add Maths, Arts 3. Delete Arts 4. Delete Maths (The las subject in the list)
Result	The page crash showing a blank page 
Expected Result	The subject should be removed, and the user should continue with the flow and seeing the form

The severity of this bus is Higher because it is a showstopper for the customer flow. Avoiding the customer use our page and continue with the normal expected flow.
